

c.) Amendment to the Claims

1. (Currently Amended) A display device comprising a surface-protective layer, information display layer, light-reflective resin sheet and a substrate-adhesive layer, said display device being a number plate adhered to an auxiliary substrate via a substrate adhesive layer, and said auxiliary substrate being mechanically fixed on an installation substrate,

wherein a specular reflective layer is installed ~~on said~~ within light-reflective resin sheet via a destructive layer, and the specular reflective layer of the display device and ~~an~~ said installation substrate are adhered via the substrate-adhesive layer, such that (i) when said display device is peeled off from the installation substrate, separation takes place at the interface of the destructive layer and any one of the layers constituting the reflective resin sheet which is in contact with the destructive layer, and/or by destruction of the destructive layer, and (ii) the specular reflective layer remains on the installation ~~substrate~~ substrate,

said destructive layer comprising cyclopentane resin according to formulae 1a, 1b or 1c, vinylcyclopentane resin according to formula 2a, vinylcyclopentanorbornene resin according to formula 2b, cyclohexadiene resin according to formula 3a, cyclohexane resin according to formula 3b or methacrylic acid ester resin according to formula 4:

(1b)

(1c)

(2a)

installed on at least a portion of a lower surface ~~part of lower surfaces~~ of the micro glass beads ~~via a~~ nearer said auxiliary substrate via said destructive layer and a focusing layer.

3. (Previously Presented) A display device as set forth in Claim 1, wherein the light-reflective resin sheet is a microprismatic retroreflective sheeting layer formed of microprisms and a specular reflective layer installed on the reflective side faces of the microprisms.

Claims 4-6 (Cancelled).

7. (Currently Amended) A display device as set forth in ~~Claim 6~~, any one of claims 1-3, comprising an active or passive type RFID device equipped with a communication antenna installed on the back of the display device away from said surface protection layer.

8. (Currently Amended) A display device as set forth in Claim 7, wherein ~~the region~~ a portion of the specular reflective layer ~~overlapping with the region that overlaps with a portion~~ of the light-reflective resin sheet on which the active or passive type RFID device equipped with a communication antenna is installed, is ~~entirely or partially removed to impart radio-wave transmitting ability~~.

9. (Currently Amended) A display device as set forth in Claim 8, wherein the specular reflective layer is ~~partially installed on the~~ installed within a portion of the light-reflective resin sheet forming said RFID device equipped with a communication antenna, and when the display device is peeled off from the installation substrate, the specular reflective layer is broken and loses its antenna function.
